

# InstaGreen® Sedum Tile - Hardy South Blend

## Product Information

Size/Coverage            15"W x 20"L (2.08 SF/tile)  
 Weight                    4.88 - 5.07 lbs/SF fully saturated  
 Fiber/Soil Base           Approx. 1" thick

## SEDUM TILE FEATURES

**Instant Green** - Hydrotech's InstaGreen Sedum Tile will typically be delivered with 95% plant coverage.

**Installation** - Size and weight of tiles allows for quick and easy installation in spaces with even limited access.

**Maintenance** - Minimal maintenance requirements once established.

**Customization** - For a unique look, perennial plants can be incorporated into Hardy South InstaGreen Sedum Tile, contact Hydrotech for specifics.

## HARDY SOUTH OVERVIEW

**Hardy South** - This blend is designed for those warm, humid climates that require a touch of color and foliage, year round. This mix will provide seasonal color throughout the year while withstanding the rigors of summer humidity in regional areas. The Hardy South mix is specifically tailored to thrive in the hot and humid climate of the southeastern United States.

**Example Varieties**

**Spring Colors**

**Summer Colors**

**Fall Colors**

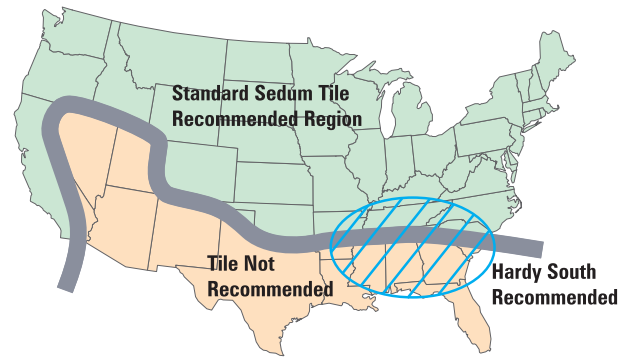

*Each tile will include 6-8 of the following varieties (depending on availability at time of planting).*

Typical Varieties	Zone	Height (inches)	Spread (inches)	Bloom Time	Bloom Color	Soil Depth

## REGIONAL AVAILABILITY

- Please refer to the map as a general guideline for InstaGreen® Hardy South Sedum Tile availability and appropriateness based on regional and climatic conditions. Each project is unique, therefore the appropriate selection of plants is critical to its success. Please contact Hydrotech for specific recommendations.

## INSTAGREEN SEDUM TILE CARE UPON DELIVERY

- Sedum Tile should be installed the day it arrives.
- Protect Sedum Tiles from weather extremes. Store them in the shade when it is hot, and if it's cold or windy, store them in a protected area where they can't be damaged by frost.
- Never store Sedum Tiles in hot, enclosed storage areas.
- Sedum Tiles may remain in pallet shippers for up to two days. After that, they must be unpacked and exposed to air and light, and they should be watered once every 2-3 days.

## INSTALLING SEDUM TILE

- All Garden Roof® Assembly components should be in place, and LiteTop® growing media should be installed and properly compacted prior to the delivery and installation of the InstaGreen Sedum Tile.
- Water the area thoroughly before planting in order to give the water time to infiltrate down into the soil.
- Just before the vegetation is laid out, the soil should be raked to even out any low or high areas and watered again. The vegetation won't root well if the soil is uneven or dry.
- Starting in one corner, place the Sedum Tile and stagger the joints, making sure the mats have good contact with the soil. Rake as needed to eliminate low or high areas created by foot traffic.
- Edges of the Sedum Tile should fit snugly against the perimeter/edging and against each other.
- The mats are easily trimmed with a utility knife or heavy-duty shears. Trimmings should be used to fill in any bare spots.
- Once installed water thoroughly.
- Sedum Tile may not be appropriate for high wind applications, contact Hydrotech for details.

## COVERAGE WARRANTY\*

- Hydrotech guarantees 90% coverage after the first and second years when part of a complete Garden Roof Assembly.
- Hydrotech's Maintenance Plan must be followed as part of warranty conditions.
- Rooftop access to sufficient water for irrigation is required, contact Hydrotech for details.

**For additional information please contact your local Hydrotech Representative.**
